The Analog Output Module HART is used for the connection of up to 8 HART capable positioners or control valves with 0 ... 20 mA or 4 ... 20 mA signals. All outputs are intrinsically safe and short-circuit proof. Each output is individually monitored for open and short circuits.

The integrated HART multiplexer allows bidirectional HART communication between HART field devices and the automation and engineering system.

The interface of the Analog Output Module HART with the internal data bus of the BusRail is designed with redundancy.

Analog (non-HART) control valves and positioners can also be operated.
